

THE BIOCLIMATIC
ALUMINUM PERGOLA

A NICE ALTERNATIVE TO THE GAZEBO OR AWNING

The **100% aluminum** SunLouvre Pergolas is an interesting alternative to the gazebo or awning. Besides being esthetic, strong and durable, SunLouvre Pergolas is a **bioclimatic** product that provides natural ventilation, lets in sunlight through the roof when louvers are opened and protects against rain or hot sun when they are closed thus avoiding the greenhouse effect of a gazebo. And unlike the awning, which can rip or tear in high winds, our pergola roofs are highly wind resistant.

With a SunLouvre Pergolas aluminum pergola, you benefit from all the advantages of a standard garden shelters like the gazebo or awning, with a high-quality, modern product, custom-made to meet your needs, for the best price on the market.
